

The Phablet

I saw the Samsung Galaxy Note yesterday at the FETC Conference.

With screen sizes ranging between 5 and 7 inches; these are primarily designed to combine the functionality of a smartphone with that of a tablet. While a phablet is larger in size than most smartphones, they are smaller in size and thinner than most miniature and full-sized tablets, making them more convenient for users to carry with them.

The popularity of phablet devices has grown significantly since the launch of the Galaxy Note in January 2013. It is reported that 25.6 million phablet devices were sold in 2012, and estimated that these figures would grow to 60.4 million in 2013, and 146 million by 2016.

Looks like the phablet is phabulous!

What next? I'm still waiting for the app that will clean my house for me. 😊
