

Google Translate Mobile App

Google offers translation options in many of its tools. You can translate a Google Doc into other languages. You can use the Google Search translate tool for quick translation of words or phrases. You can use the Google Translate website at translate.google.com to work on large portions of text or entire web pages.

However one of the most powerful tools is **Google's Translate mobile app**. It adds many additional features that aid in live, on-the-spot translation. Here's how it works:

- First, download the Google Translate app for [Android](#) or [iOS](#).
- Next choose the language you speak and the language you wish to translate to and from.
- You can now use the **microphone icon** to speak in your language and the app will then speak the translation.
- Or you can use the **doodle icon** to hand write in your language and the app will translate and speak in the other language.
- Or you can use the **camera icon** to point your device at any printed text (such as a sign) in one language and it will translate it live into your other chosen language.
